Project Title : Hotel Management System

2.1. Functional requirements:

1. **User Authentication and Role Management**

- The system shall provide separate login interfaces for Guests, Receptionists, and Administrators with role-based access.

2. **Hotel Reservation and Room Management**

- The system shall allow guests to search available rooms, make bookings, modify or cancel reservations, and enable receptionists to manage room allocation and check-in/check-out.

3. **Administrative Management**

- The system shall allow administrators to manage hotel records such as rooms, customers, employees, bookings, and generate reports using the PostgreSQL database.

2.2. Non functional requirements:

1. **Security**

- The system shall ensure secure user authentication and protect hotel and customer data from unauthorized access.

2. **Performance**

- The system shall respond quickly to user requests and efficiently handle multiple bookings and database transactions.

3. **Usability**

- The user interface shall be simple, responsive, and easy to navigate for Guests, Receptionists, and Administrators across different devices.

2.3. List of AI tools used for building UI(if any):

- Gemini

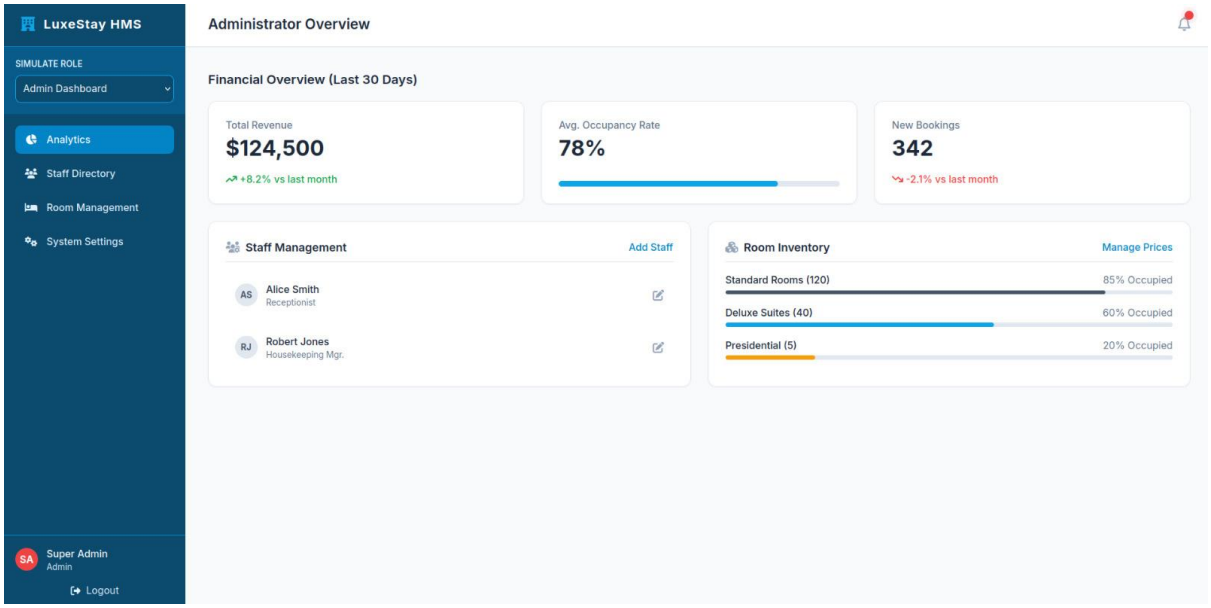

2.4. Prompt (if any) :

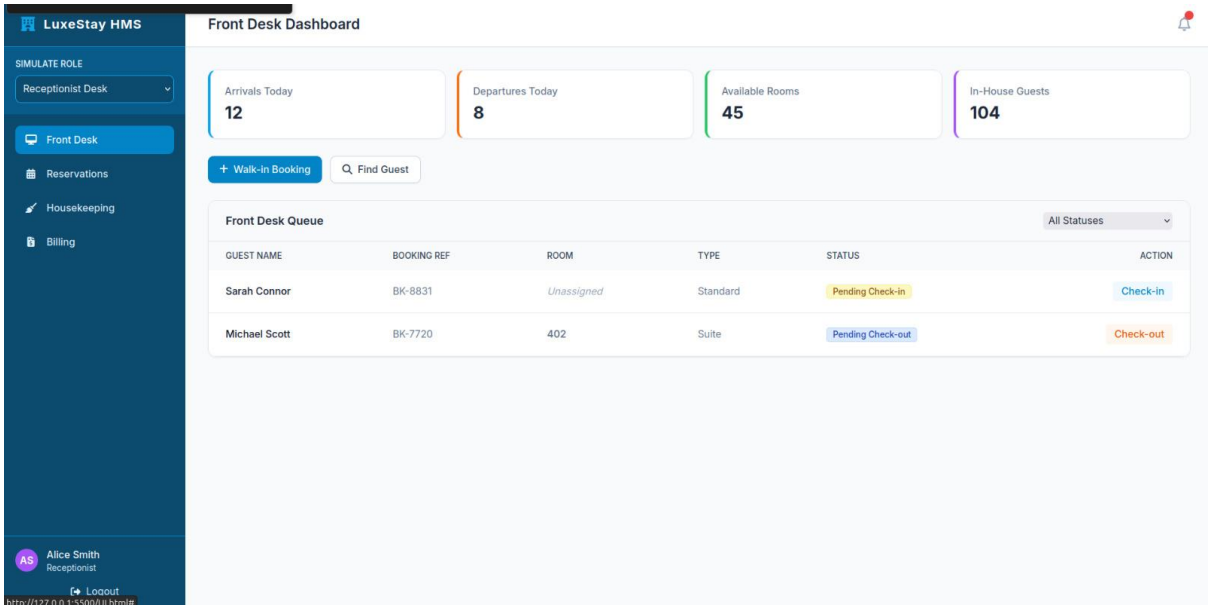

Sl. No	Name of the tool	prompts
1	Gemini Canvas	Prompt 1: Make Web User Interfaces for Guest, Receptionist, Administrators for a Hotel Management System made from an Object Oriented Model using Java . It has a separate database built on postgreSQL.
2	Gemini Canvas	Give the interface design as an HTML code.
3	--	--

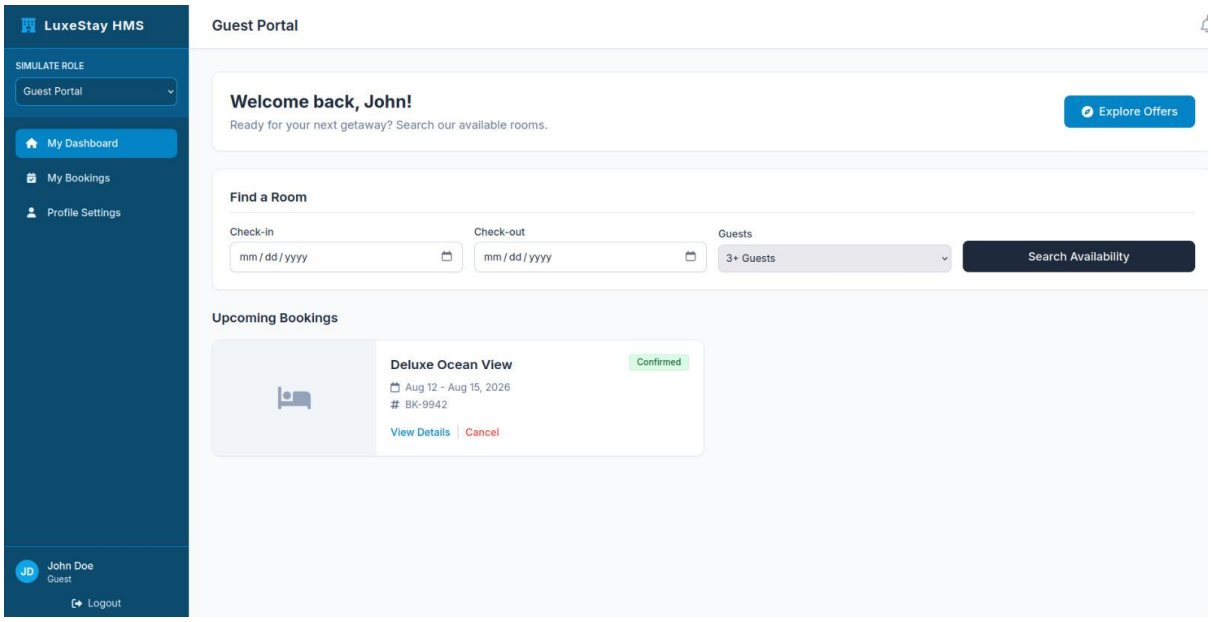

2.5. List of files:

HTML file: ***UI.html***
